

## **2A, 18V input, 500KHz efficient synchronous step-down DC-DC converter**

### **■ DESCRIPTION**

HM2259G is a high-efficiency synchronous rectifier step-down converter with switching frequency of 500KHz. The input voltage range of HM2259G is 4.5V to 18V, and the output voltage range is 0.6V to 5V. The built-in power switch has a very low on resistance, making it very efficient when the output current reaches 2A.

HM2259G adopts constant on time (COT) mode control architecture, which has very fast transient response characteristics. At the same time, it uses on-chip compensation circuit, which makes the peripheral application circuit simpler.

Internal current limiting, short circuit protection circuit, over temperature protection circuit, etc. prevent chips and external devices from being damaged when they are overloaded or overheated; 500KHz operating frequency and SOT-23-6 packaging minimize the board area of the overall solution.

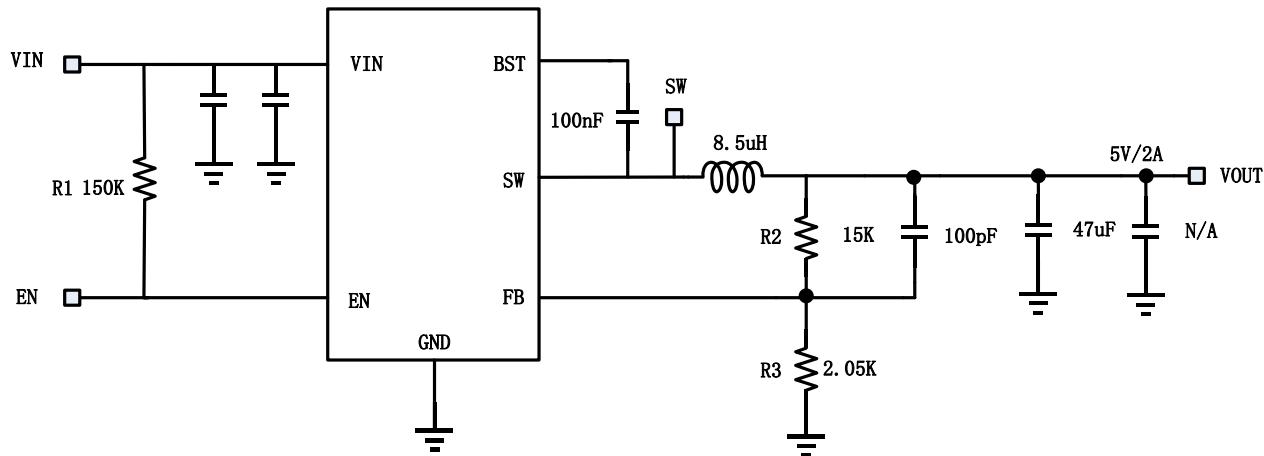

### **■ FEATURES**

- ± 2% output voltage accuracy
- 4.5V-18V input voltage range
- Output current of maximum 2A
- Output voltage range 0.6V~5V
- High efficiency synchronous rectification mode
- 500KHz switching frequency
- Fast transient response characteristics
- Built in HICCUP function
- Output short-circuit protection function
- Current limiting protection
- Short circuit protection
- Built in soft start
- Input undervoltage lockout
- Output overvoltage and undervoltage protection
- Over temperature protection
- SOT-23-6 package

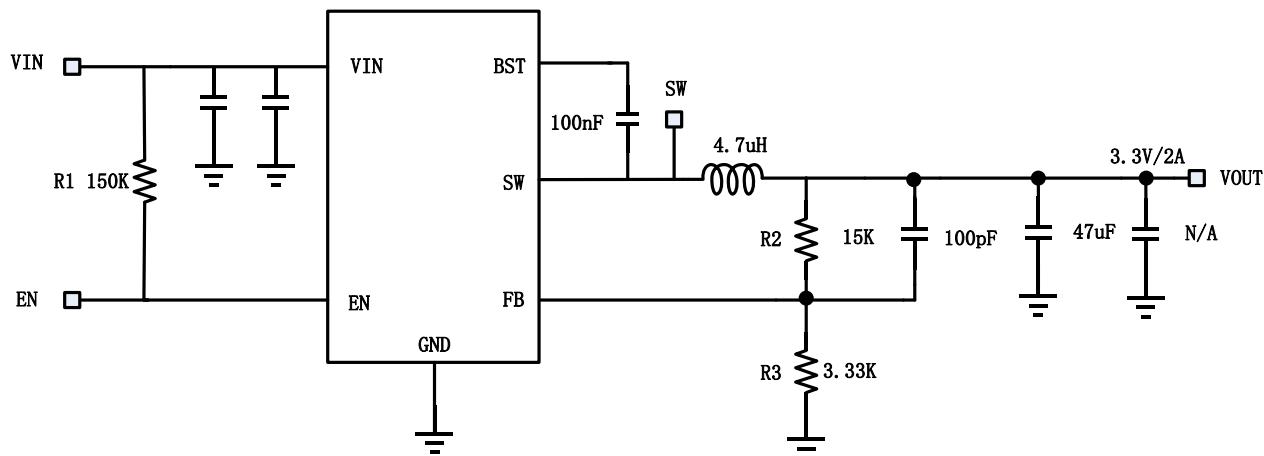

### **■ APPLICATIONS**

- Digital STB
- Display
- Router

■ Typical Application Circuit

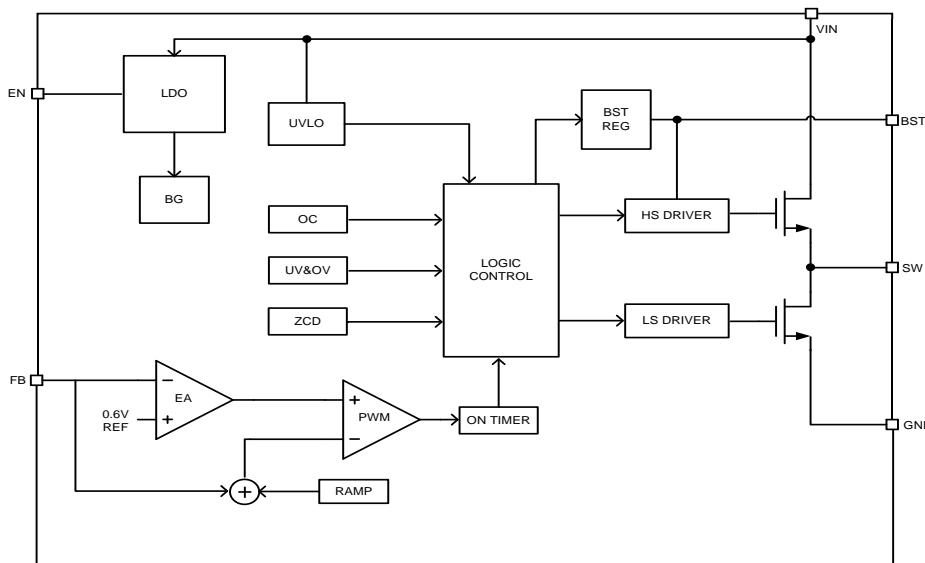

Vin=12V, Vout=5V, IL=2A Typical application circuit

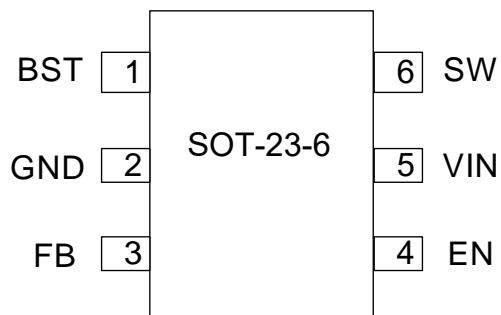

Vin=12V, Vout=3.3V, IL=2A Typical application circuit

Note: The above lines and parameters are for reference only. For the actual application circuit, please set the parameters on the basis of full measurement.

## ■ RECOMMEND PACKAGE TYPE

Pin No.	Pin Name	Pin Function
1	BST	Bootstrap pin, connect a 0.1uF capacitor between BST and SW
2	GND	Ground
3	FB	Output voltage feedback input terminal
4	EN	Chip enable pin, pulled up to high effective, cannot be suspended
5	VIN	Chip voltage input
6	SW	Switch terminal

■ **ABSOLUTE MAXIMUM RATINGS**  $T_{amb}=25^{\circ}C$
